

## Tropical Grasses

Tropical pasture grasses cover a wide range of species. The environments in which they are grown include the wet tropics and the semi-arid tropics.

# Marandu

## Brachiaria brizantha

- Good persistence under grazing
- More compatible with legumes than some other Brachiaria
- Tall type - well suited to cutting
- High seed production potential
- Best adapted to the humid and sub-humid tropic areas

## Specifications

Seeding rate 10-15kg/ha
