

Perennial Ryegrass

Perennial ryegrass is a cool season perennial grass used in cool, temperate climates throughout the world. It has many worthy attributes and is considered the best overall pasture grass for many areas. The inflorescence is a spike with alternately arranged spikelets attached edgewise directly to the central axis. Leaves of perennial ryegrass are folded in the bud. Blades are bright green, prominently ridged on the upper surface, and sharply taper-pointed. Lower surfaces are smooth, glossy, and hairless. Leaf margins are slightly rough to the touch. Ryegrasses, in general, grow best on

Arrow

Perennial Ryegrass (*Lolium perenne*)

- High yield
- Medium-late flowering
- Winter and early spring growth
- Good quality-reduced aftermath heading
- Good clover compatibility
- Exceptional cool season growth
- High total ME/ha
- Strong persistence

- High performance perennial with winter and early spring growth.
- Medium-late flowering.
- Good quality- reduced aftermath heading and good clover compatibility.

Plants were selected for:

- High drymatter yield
- Improved early season growth
- Exceptional persistence

High Yield

Arrow delivers high levels of winter and early spring growth. Allows farmers to start their season earlier by offering more feed when it is essential. Ideal for early calving or early lamb finishing systems.

Medium-late Flowering

This gives a good balance of improved late spring quality & increased early season growth.

START YOUR SEASON EARLIER

Specifications

Sowing rate (pure)	20 – 25 kg/ha
Sowing rate (mixture)	5 – 18 kg/ha
